Ruby-throated Migration Facts

- The Ruby-throated Hummingbird migrates up to 1,200 miles between wintering and breeding grounds.
- Many birds fly non-stop across the 500-mile Gulf of Mexico — a journey of 18–22 hours.
- Spring migration begins in Mexico in late January; birds reach Canada by May–June.
- Fall migration starts mid-July for adults; immature birds migrate separately in August–October.

Western Hummingbird Migration Routes

Rufous, Anna's, Calliope & more — color each route a different color

Western Migration Facts

- The Rufous Hummingbird has the longest migration of any hummingbird — up to 4,000 miles round trip.
- Most western hummingbirds winter in Mexico; some Anna's Hummingbirds stay year-round on the Pacific Coast.
- Calliope Hummingbirds migrate through mountain meadows at elevations up to 12,000 feet.
- Hummingbirds use the sun, Earth's magnetic field, and landmarks to navigate during migration.
